

Nepean Avenue Quietway and Path Design

The new pedestrian path on Nepean Avenue will deliver the critical missing link on the Great River Walk to connect the existing Bridge-to-Bridge loop between Tench Reserve and Memorial Avenue.

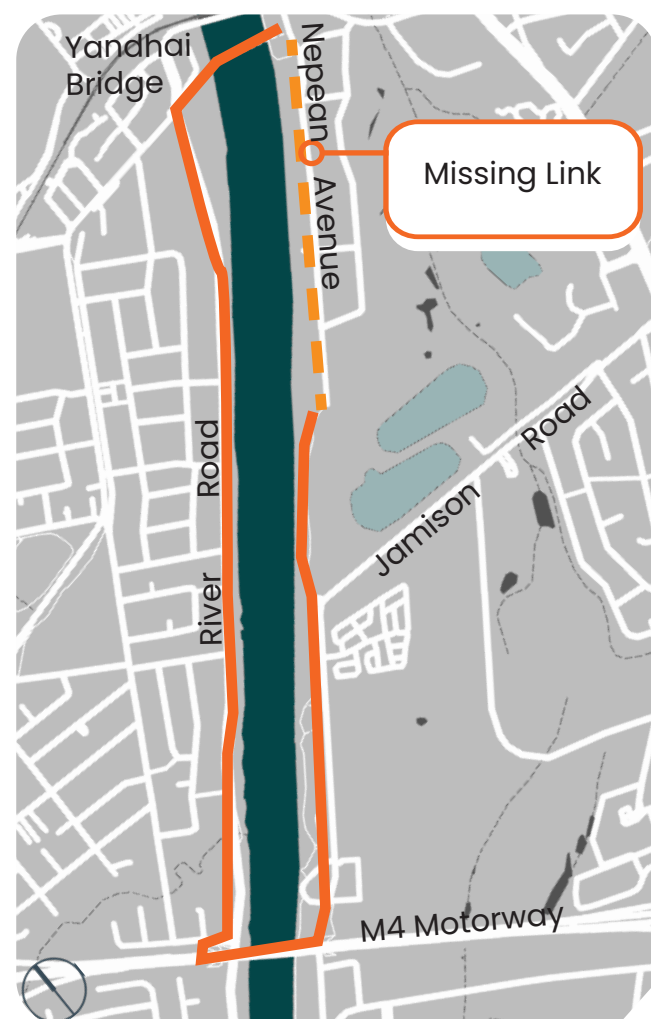

Council proposes to construct a 2.6m wide pedestrian pathway along the western side of Nepean Avenue at the road level, with a bollard separation between the path and the road to protect pedestrians from traffic.

We have listened to feedback provided during earlier consultations and are now seeking further feedback to finalise the design. To provide feedback, please email: nepeanavenue@penrith.city

HOW WILL DRIVEWAY ACCESS BE MAINTAINED?

The lighting bollards will be adequately spaced to ensure there's sufficient room for the safe entry and exit of vehicles around driveways, particularly when towing or backing out trailers or boat.

WILL PARKING CAPACITY BE IMPACTED?

Parking capacity will be unaffected. Some additional street trees are proposed on the Eastern side in locations between driveways which are too narrow for a car to park (<4m).

HOW WILL BINS BE COLLECTED?

Bins will need to be placed in the paved section between the road and the new pathway, in line with the bollards but leaving at least a one-metre gap between the bollard and the bin.

WILL THERE BE ANY SPEED BUMPS?

Permanent speed humps are proposed where temporary humps are currently installed.

Traffic calming bands are also proposed along Nepean Avenue. These are bands of textured pavers that provide a visual and tactile cue to road users of the changed driving environment. The traffic-calming paver bands on Nepean Avenue will assist drivers to keep to the proposed 30km/hr speed limit.

WHAT IS THE IMPACT OF THE ADDITIONAL LIGHTING?

Bollard and tree lighting will be designed by a specialist lighting designer to improve the amenity and safety of Nepean Avenue whilst avoiding excess light spill and pollution.
