

KURRAJONG

Brachychiton populneus

A medium-sized Australian native semi-deciduous species that is highly drought-tolerant. It features glossy green leaves and cream flowers with pink and purple streaks from late spring to autumn. The flowers are a nectar treat for bees, butterflies, and other foragers. The seeds in the pods are bush tucker – when roasted they can be eaten, and when grounded can be used in bread. Given the nature of the soils and local environment, we expect this tree to reach 8-10m at full maturity, with a canopy of 7-10m wide.

Lilly Pilly

Acmena smithii

A medium-sized Australian native evergreen species featuring dark green leaves. Cream-white flowers blossom in summer, followed by round white to mauve fruits. This tree attracts native birds. Given the nature of the soils and local environment, we expect this tree to reach 8-10m at full maturity, with a canopy of 3-5m wide.

FOREST RED GUM

Eucalyptus tereticornis

A tall native evergreen species. This tree features a long straight trunk with ascending branches. Its bark is smooth but mottled in colours from blue grey to cream, shedding in patches. Younger leaves are often rounded in shape, while mature leaves are long, narrow and lance-shaped. Flowers bloom in delicate white clusters from winter to spring. Given the nature of the soil and local environment, we expect this tree to reach a height of up to 35m at full maturity, with a canopy width of 15-25m.

NARROW-LEAVED IRONBARK

Eucalyptus crebra

A large-sized tree with a long straight trunk and an open and spreading crown. It's bark is deeply and coarsely furrowed and dark grey. It has grey-green narrow lance-shaped leaves and white flowers from late spring to summer followed by cup shaped seed capsules. Given the nature of the soils and local environment, we expect this tree to reach 20 – 35m at full maturity, with a canopy of 8 – 12m wide.

NARROW LEAF PAPERBARK “Snow in Summer”

Melaleuca linariifolia

This small native evergreen species features a soft papery bark and small dark green leaves. Flower spikes bloom in early summer leaving attractive masses of snowy white fragrant blossoms. Given the nature of the soil and local environment, we expect this tree to reach up to

8m at full maturity, with a canopy of 4-8m wide.

BROAD LEAF PAPERBARK

Melaleuca quinquenervia

An attractive native evergreen tree. One of the largest Paperbark species with olive-green lance-shaped leaves. It has creamy white bottlebrush flowers and thick papery bark. Given the nature of the soil and local environment, we expect this tree to reach up to 8 - 12m at full maturity, with a canopy of 5 - 8m wide.
