

## Bel-Air Road and Coreen Avenue

Council has conducted extensive traffic investigations and future traffic modelling which has assessed the Coreen Avenue and Bel-Air Road intersection performance as failing in both AM and PM peak periods by 2036.

### Proposed changes:

- Upgrade to a dual-lane roundabout at Bel-Air Road and Coreen Avenue.
- Lane widening on approach to the roundabout for east and westbound traffic.
- Installation of new pedestrian refuge.
- A small section of the parking lane on Coreen Avenue (western and eastern approach) will be removed to accommodate the lane widening. This will result in a small number of street parking spaces lost.

### Benefits include:

- The new dual-lane roundabout will improve access in and out of Bel-Air Road.
- Pedestrian refuge will improve pedestrian safety.
- Contributes to the overall performance of Coreen Avenue during peak periods.
